                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
which encode human secretory or membrane proteins represented by AAB88317 - AAB88419. Included in the invention are primers AAF93917 - AAF94295 and AAF62232 - AAF62235 which are used to isolate CDNA sequences of the invention. The invention also includes methods the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene therapy. The polynucleotide sequences and the
                                                                                                           This invention relates to nucleic acid sequences AAF93744 -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16-JUN-1999;
17-AUG-1999;
09-NOV-1999;
            cell proliferative disorders e.g. arterioscierosis and cancers; autoimmune or inflammatory disorders e.g. Addison's disease and acquired immunodeficiency syndrome (AIDS); viral, bacterial, fungal, parasitic, protozoal and helminthic infections; gastrointestinal disorders e.g. dysphagia and tritable bowel syndrome; neurological disorders e.g. epilepsy and Parkinson's disease; prion diseases e.g. Creutzfeldt-Jakob disease and mental disorders e.g. anxiety, schizophrenia and Tourette's
                                                                                                                            intracellular signalling molecules INTRA1 - INTRA52, represented in AAB64369 - AAB64420. Modulators of the intracellular signalling molecules of the invention exhibit immunosuppressive; cytostatic; neuroprotective; nootropic; antiarteriosclerotic; antiinflammatory; anti-HIV; neuroleptic; antibacterial; antifungal; antiviral; antiparasitic; nantihelminthic; and antiparkinsonian activity. INTRA polypeptides their agonists and antagonists are useful for the treatment of a condition associated with decreased or increased expression of functional INTRA. Disorders associated with abnormal INTRA expression or activity include
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cytostatic; neuroprotective; nootropic; antiarteriosclerotic; cance antiinflammatory; anti-HIV; neuroleptic; antibacterial; antifungal; antiviral; antiparasitic; antihelminthic; antiparkinsonian; AIDS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cell proliferative disorder; arteriosclerosis autoimmune; epilepsy; inflammatory disorder; Addison's disease; gastrointestinal disorder; neurological disorder; Parkinson's disease; Creutzfeldt-Jakob disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel murine nucleic acid sequences encoding to clodin family of tight junction (TJ)-constituting membrane protein can be used in medical field. This sequence represents the clodin 6 protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tight junction-constituting membrane protein clodin family - useful in the medical field
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2000-285512/25

                                        The polynucleotide sequence given in AAA78381 to AAA78432 encode the CC human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins have activities based on the tissues and cells the genes are CC expressed in Examples of activities include: cytostatic; antianaemic; antidiabetic; antiinflammatory; ophthalmological; antirheumatic; CC antidritritic; antipsoriatic; antimicrobial and antiparkinsonian.

CC uncotropic; neuroprotective; antimicrobial and antiparkinsonian.

CC Human secreted protein polynucleotides, polypeptides, antagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other CC diseases, disorders, and/or conditions such as: (a) cancers; (b) CC disorders of the immune system; (c) angiogenesis disorders; (d) myperproliferative disorders; (e) cardiovascular disorders; (f) diseases associated with increase apoptosis; (g) neurological diseases; and CC (h) infectious diseases. They are also used to promote wound healing. AAA78372 to AAA78380 and AAB24436 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAB24453
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT

                                                                                                                                                                                                                                                                                                                                                       The polynucleotide sequence given in AAA78381 to AAA78432 encode the human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; antianaemic; antidiabetic; antiinflammatory; ophthalmological; antirheumatic; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation; antistation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antiinflammatory; ophthalmological; antirheumatic; antiarthritic; antipsoriatic; antiangiogenic; cardiant; anti-HIV; nootropic; neuroprotective; antimicrobial; antiparkinsonian; cancer; immune system disorder; angiogenesis; hyperproliferative disorder; cardiovascular disorder; appoptosis; neurological disease;
                                                                                 associated with increase apoptosis; (g) neurological diseases; and (h) infectious diseases. They are also used to promote wound heali AAA78372 to AAA78380 and AAB24436 represent sequences used in the
                                                                                                                                                                                                                    antiarthritic; antipsoriatic; antianglogenic; cardiant; anti-HIV; nootropic; neuroprotective; antimicrobial and antiparkinsonian. Human secreted protein polynucleotides, polypeptides, antagonists agonists may be useful in treating, preventing, and/or diagnosing diseases, disorders, and/or conditions such as: (a) cancers; (b)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Forty seven human nucleic acids encoding secreted proteins, useful in
the treatment, prevention and diagnosis of cancers, disorders of the
immune system, angiogenesis disorders, neurological diseases and
                                                    exemplification of the present invention.
                                                                                                                                                                   disorders of the immune system; (c) angiogenesis disorders; (d) hyperproliferative disorders; (e) cardiovascular disorders; (f) diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB24485;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the use of peptides as claudin-mediated cell adhesion modulators. The claudin-6 and claudin-9 groups of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to facilitate drug delivery to the desired target site. The present

                                                                          The present invention relates to the use of peptides as claudin-mediated cell adhesion modulators. The claudin-6 and claudin-9 groups of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to facilitate drug delivery to the desired target site. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to the use of peptides as claudin-mediated cell adhesion modulators. The claudin-6 and claudin-9 groups of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to
                                                                                                                                                                                                                                                                                                                                                                                                      Antibody modulation of claudin-mediated cell adhesion for increasing vasopermiability, for delivering drugs to tumors and the nervous systand across the skin - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claudin-6 modulating agent; claudin-9 modulating agent; cell adhesion recognition sequence; CAR sequence; autoi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         03-NOV-1998;

                                                                                                                                                                                                                                                         The present invention relates to the use of peptides as claudin-mediated cell adhesion modulators. The claudin-6 and claudin-9 groups of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to facilitate drug delivery to the desired target site. The present sequence has a cyclic conformation.

The claudin-6 and claudin-9 groups of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to facilitate drug delivery to the desired target site. The present
                                                                                                            Claudin-6 modulating agent; claudin-9 modulating agent; cell adhesion recognition sequence; CAR sequence; autoimmune inflammatory disease; cancer; graft rejection; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claudin-6 modulating agent; claudin-9 modulating agent; cell adhesion recognition sequence; CAR sequence; autoi inflammatory disease; cancer; graft rejection; cyclic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
The present invention relates to the use of peptides as claudin-mediated cell adhesion modulators. The claudin-6 and claudin-9 groups of proteins are cadherins, which are membrane glycoprotecins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and those peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claudin-6 modulating agent; claudin-9 modulating agent; cell adhesion recognition sequence; CAR sequence; autoimmune disease; inflammatory disease; cancer; graft rejection; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the use of peptides as claudin-mediated cell adhesion modulators. The claudin-6 and claudin-9 groups of proteins are cadhesion, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to feel that the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the second in the s

                             The present sequence is a peptide which can be used in a claudin-mediated cell adhesion modulator. The claudin group of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and this peptide can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, it can also be used to facilitate drug delivery
                                                                                                                            Claim 71; Page 103; 121pp; English.

"Isolation of the two flax stearoyl-acyl carrier protein desaturase
gene promoters by the inverse polymerase chain reaction and their
differential regulation in transgenic flax, tobacco, and canola.";

Submitted (MAY-1998) to the EMBL/GenBank/DDBJ databases.

-1- FUNCTION: CONVERTS STEAROYL-ACP TO OLEOYL-ACP BY INTRODUCTION OF
CIS DOUBLE BOND BETWAEN CARBONS DELTA-9 AND DELTA-10 OF THE ACYL
                                                                                                                                                                                                  FEBS
                                                                                                                                                                                                                                  C-type lectin superfamily with two recognition domains.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       InterPro; IPR001225; FA_desaturase.

-: CATALYTIC ACTIVITY: ALCOHOL + NAD(+) = ALDEHYDE OR KETONE + NADH.

-: CATALYTIC ACTIVITY: FORMALDEHYDE + GLUTATHIONE + NAD(+) =

S-FORMYLGLUTATHIONE + NADH.

-: COFACTOR: REQUIRES ZINC FOR ITS ACTIVITY (POTENTIAL).

-: SUBCELLULAR LOCATION: CYTOPLASMIC (POTENTIAL).

-: SIMILARITY: BELONGS TO THE ZINC-CONTAINING ALCOHOL DEHYDROGENASE FAMILY. CLASS-III SUBFAMILY.

-: CAUTION: THIS IS A CONCEPTUAL TRANSLATION; A FRAMESHIFT HAD TO BE INTRODUCED IN POSTTION 128 TO PRODUCE THIS ORF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  use by non-profit institutions we are modified and this statement is not removed. RP SEQUENCE OF 1-47.

RA MEDILINE-92118844; PubMed-1731906;

RA GULDELL W.G., Holmquist B., Vallee B.L.;

RA FUNCTION, Characterization, and partial sequence of the glutathione-dependent formaldehyde dehydrogenase from Escherichia Coli: a class III alcohol dehydrogenase.";

Blochemiatry 31:475-481(1992).

C-1- FUNCTION: HAS HIGH FORMALDEHYDE DEHYDROGENASE ACTIVITY IN THE DIOCHMISTION FAMBLE AND CATALYZES THE OXIDATION OF NORMAL PRESENCE OF GLUTATHIONE AND CATALYZES THE OXIDATION OF NORMAL ALCOHOLS IN A REACTION THAT IS NOT GSH-DEFENDENT. IN ADDITION, CLUDING COMEGA-THIOL FATTY ACIDS, ALSO ARE SUBSTRATES.

C-1- CATALYTIC ACTIVITY: FORMALDEHYDE FORMED OR KETONE + NADH.

C-1- CATALYTIC ACTIVITY: FORMALDEHYDE + GLUTATHIONE + NADH.

C-1- CCFACTOR: REQUIRES ZINC FOR ITS ACTIVITY (4 IONS OF ZINC PER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

Keen T.J., Inglehearn C.F.;

Submitted (OCT-1998) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: COMPONENT OF TIGHT JUNCTION (TJ) STRANDS.

-I- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-I- SIMILARITY: BELONGS TO THE CLAUDIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CLDY_BRARE STANDARD; PRT; 2
